

Policy Statement

Oden Services UK Ltd will ensure that it reacts appropriately to any actual or suspected incidents relating to information systems and information within the custody of Oden.

Purpose

The aim of this policy is to ensure that Oden Services UK Ltd reacts appropriately to any actual or suspected security incidents relating to information systems and data.

Scope

This document applies to all Employees, Directors or partners of Oden Services UK Ltd, that have access to, or custody of, customer information.

All staff must understand and adopt use of this policy and are responsible for ensuring the safety and security of the clients data.

All staff have a role to play and a contribution to make safe and secure destruction of all data bearing devices.

Definition

This policy needs to be applied as soon as information systems or data are suspected to be, or are actually affected by an adverse event which is likely to lead to a security incident.

The definition of an “information management security incident” (‘Information Security Incident’ in the remainder of this policy and procedure) is an adverse event that has caused or has the potential to cause damage to an organisation’s assets, reputation and / or personnel. Incident management is concerned with intrusion, compromise and misuse of information and information resources, and the continuity of critical information systems and processes.

An Information Security Incident includes, but is not restricted to, the following:

- The loss or theft of data or information.
- The transfer of data or information to those who are not entitled to receive that information.
- Attempts (either failed or successful) to gain unauthorised access to data or information storage or a computer system.
- Changes to information or data or system hardware, firmware, or software characteristics without Oden’s knowledge, instruction, or consent.
- Unwanted disruption or denial of service to a system.
- The unauthorised use of a system for the processing or storage of data by any person.

Examples of some of the more common forms of Information Security Incidents have been provided in Appendix 2.

Risks

Oden Services UK Ltd recognises that there are risks associated with staff handling data bearing devices in order to conduct data destruction.

This policy aims to mitigate the following risks:

- To reduce the impact of information security breaches by ensuring incidents are followed up correctly.
- To help identify areas for improvement to decrease the risk and impact of future incidents.

Non-compliance with this policy could have a significant effect on the efficient operation of Oden Services UK Ltd and may result in financial loss and an inability to provide necessary services to our clients.

Procedure for Incident Handling

Events and weaknesses need to be reported at the earliest possible stage as they need to be assessed by Paul Seward or Andrew South. The Advisor enables Paul Seward or Andrew South to identify when a series of events or weaknesses have escalated to become an incident. It is vital to gain as much information as possible from the staff member to identify if an incident is occurring.

For full details of the procedure for incident handling please refer to Appendix 3.

Policy Compliance

If any user is found to have breached this policy, they may be subject to Oden Services UK Ltd disciplinary procedure. If a criminal offence is considered to have been committed further action may be taken to assist in the prosecution of the offender(s).

If you do not understand the implications of this policy or how it may apply to you, seek advice from Paul Seward or Andrew South

Policy Governance

The following table identifies who within Oden Services UK Ltd is Accountable, Responsible, Informed or Consulted with regards to this policy. The following definitions apply:

- **Responsible** – the person(s) responsible for developing and implementing the policy.
- **Accountable** – the person who has ultimate accountability and authority for the policy.

- **Consulted** – the person(s) or groups to be consulted prior to final policy implementation or amendment.
- **Informed** – the person(s) or groups to be informed after policy implementation or amendment.

Responsible	Andrew South
Accountable	Paul Seward
Consulted	Phillip Bendon
Informed	ICO

Review and Revision

This policy, and all related appendices, will be reviewed as it is deemed appropriate, but no less frequently than every 12 months.

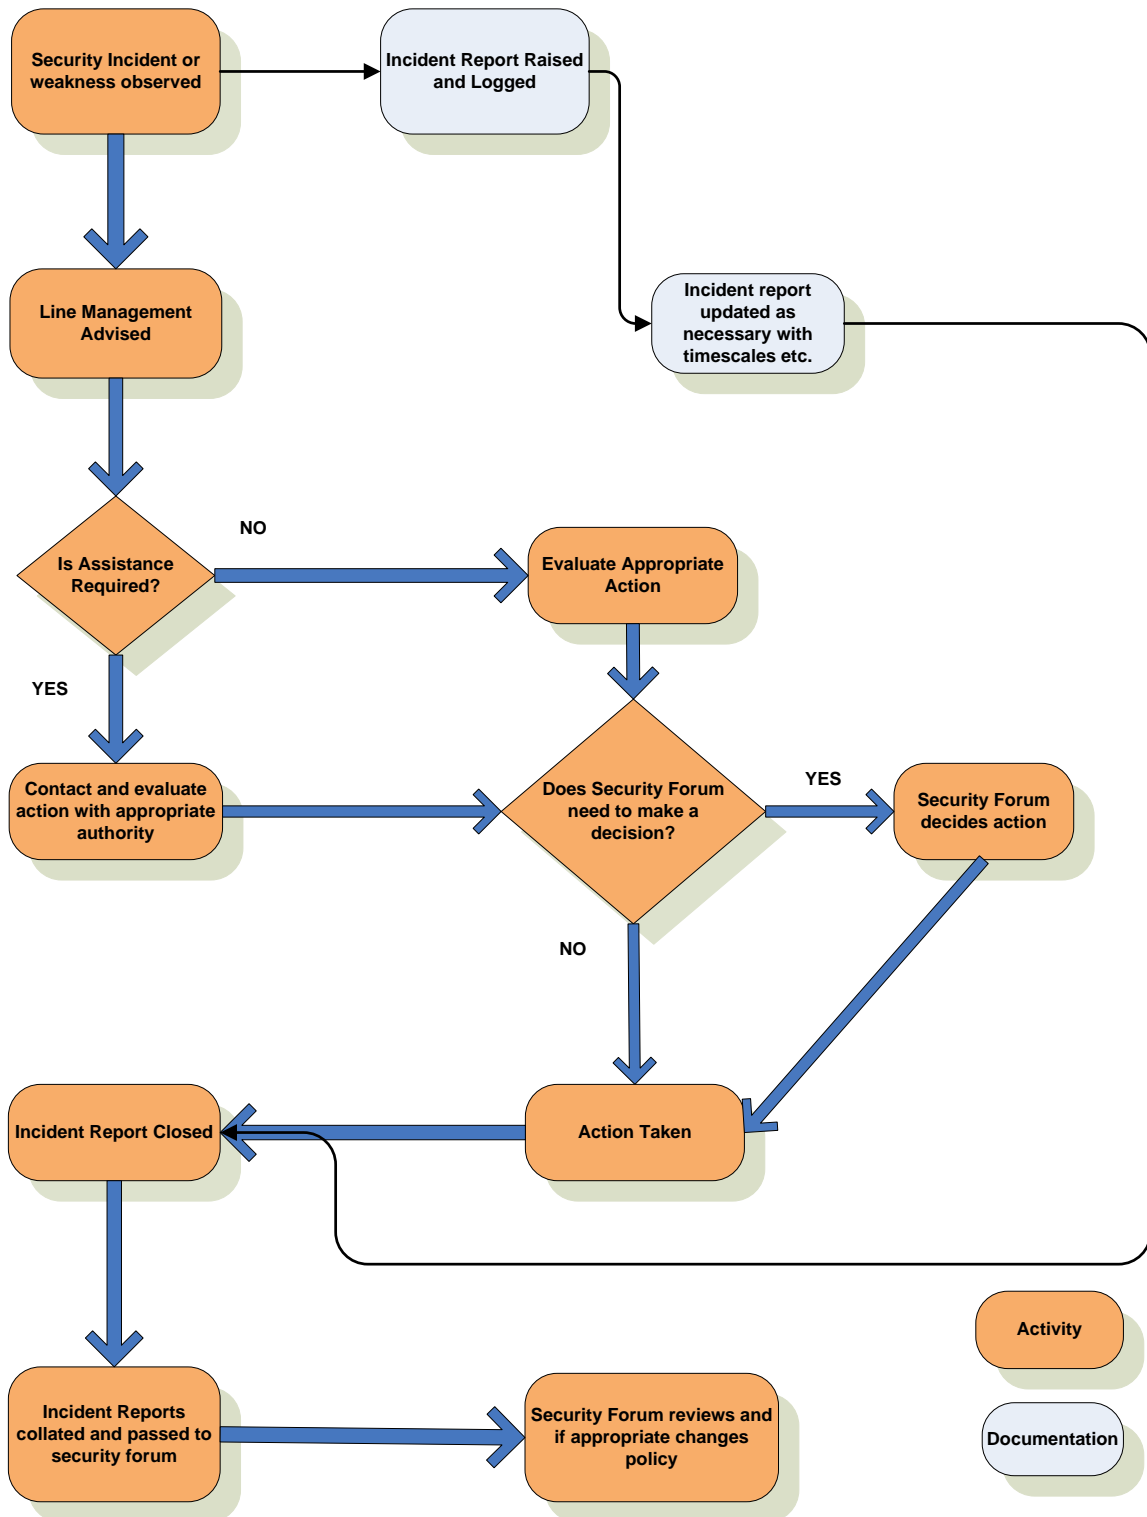

Policy review will be undertaken by Paul Seward

Key Messages

- All staff should report any incidents or suspected incidents immediately by way of verbal, email or phone comucations.
- We can maintain your anonymity when reporting an incident if you wish.
- If you are unsure of anything in this policy you should ask for advice from Paul Seward

Appendix 1 – Process Flow; Reporting an Information Security Event or Weakness

Process Flow – Security Incident Reporting

Appendix 2 – Examples of Information Security Incidents

Examples of the most common Information Security Incidents are listed below. It should be noted that this list is not exhaustive.

Malicious

- Giving information to someone who should not have access to it - verbally, in writing or electronically.
- Hardware theft
- Computer infected by a Virus or other malware.
- Sending a sensitive e-mail to 'all staff' by mistake.
- Receiving unsolicited mail of an offensive nature.
- Receiving unsolicited mail which requires you to enter personal data.
- Finding data that has been changed by an unauthorised person.
- Receiving and forwarding chain letters – including virus warnings, scam warnings and other emails which encourage the recipient to forward onto others.
- Unknown people asking for information which could gain them access to data (e.g. a password or details of a third party).

Misuse

- Use of unapproved or unlicensed software on Oden Services UK Ltd equipment.
- Accessing a computer database using someone else's authorisation (e.g. someone else's user id and password).
- Writing down your password and leaving it on display / somewhere easy to find.
- Printing or copying confidential information and not storing it correctly or confidentially.

Theft / Loss

- Theft / loss of a hard copy file.
- Theft / loss of any computer equipment.

Appendix 3 - Procedure for Incident Handling

Reporting Information Security Events or Weaknesses

The following sections detail how Staff must report information security events or weaknesses. Appendix 1 provides a process flow diagram illustrating the process to be followed when reporting information security events or weaknesses

Reporting Information Security Events for all Employees

Security events, for example a virus infection, could quickly spread and cause data loss across the organisation. All users must understand, and be able to identify that any unexpected or unusual behaviour on the workstation could potentially be a software malfunction. If an event is detected staff **must**:

- Note the symptoms and any error messages on screen.
- Disconnect the workstation from the network if an infection is suspected
- Not use any removable media (for example USB memory sticks) that may also have been infected.

All suspected security events should be reported immediately to Paul Seard or Andrew South. If the Information Security event is in relation to paper or hard copy information, for example personal information files that may have been stolen from a filing cabinet, this must be reported to Senior Management for the impact to be assessed.

Oden Services UK Ltd will require you to supply further information, the nature of which will depend upon the nature of the incident. However, the following information must be supplied:

- Contact name and number of person reporting the incident.
- The type of data, information or equipment involved.
- Whether the loss of the data puts any person or other data at risk.
- Location of the incident.
- Inventory numbers of any equipment affected.
- Date and time the security incident occurred.
- Location of data or equipment affected.
- Type and circumstances of the incident.

Reporting Information Security Weaknesses for all Employees

Security weaknesses, for example a software malfunction, must be reported through the same process as security events. Users must not attempt to prove a security weakness as such an action may be considered to be misuse.

Weaknesses reported to application and service providers by employees must also be reported internally to the management team. The service provider's response must be monitored and the effectiveness of its action to repair the weakness must be recorded.

Reporting Information Security Events for Oden Staff

Information security events and weaknesses must be reported to a nominated central point of contact within Oden Services UK Ltd as quickly as possible and the incident response and escalation procedure must be followed.

Security events can include:

- Uncontrolled system changes.
- Access violations – e.g. password sharing.
- Breaches of physical security.
- Non compliance with policies.
- Systems being hacked or manipulated.

Security weaknesses can include:

- Inadequate firewall or antivirus protection.
- System malfunctions or overloads.
- Malfunctions of software applications.
- Human errors.

The reporting procedure must be quick and have redundancy built in. All events must be reported to at least two nominated people within the management team who must both be required to take appropriate action. The reporting procedure must set out the steps that are to be taken and the time frames that must be met.

An escalation procedure must be incorporated into the response process so that staff are aware who else to report the event to if there is not an appropriate response within a defined period.

Management of Information Security Incidents and Improvements

A consistent approach to dealing with all security events must be maintained across the Council. The events must be analysed to establish when security events become escalated to an incident. The incident response procedure must be a seamless continuation of the event reporting process..

All high and medium incidents should be reported to Paul Seward or Andrew South.. All low incidents should be reported to Andrew South. To decide what level of impact an incident has users should refer to the Risk Impact Matrix in Appendix 4.

Collection of Evidence

If an incident may require information to be collected for an investigation strict rules must be adhered to. The collection of evidence for a potential investigation must be approached with care. Phillip Bendon must be contacted immediately for guidance and strict processes must be followed for the collection of forensic evidence. If in doubt about a situation, for example concerning hardware being compromised, contact the management team for advice.

Responsibilities and Procedures

Management responsibilities and appropriate procedures must be established to ensure an effective response against security events. Paul Seward must decide when events are classified as an incident and determine the most appropriate response.

An incident management process must be created and include details of:

- Identification of the incident, analysis to ascertain its cause and vulnerabilities it exploited.

- Limiting or restricting further impact of the incident.
- Tactics for containing the incident.
- Corrective action to repair and prevent reoccurrence.
- Communication across the Council to those affected.

The process must also include a section referring to the collection of any evidence that might be required for analysis as forensic evidence. The specialist procedure for preserving evidence must be carefully followed.

The actions required to recover from the security incident must be under formal control. Only identified and authorised staff should have access to the affected systems during the incident and all of the remedial actions should be documented in as much detail as possible.

The officer responsible for an incident should risk assess the incident based on the Risk Impact Matrix (please refer to Appendix 4). If the impact is deemed to be high or medium this should be reported immediately to Andrew South

Learning from Information Security Incidents

To learn from incidents and improve the response process incidents must be recorded and a Post Incident Review conducted. The following details must be retained:

- Types of incidents.
- Volumes of incidents and malfunctions.
- Costs incurred during the incidents.

The information must be collated and reviewed on a regular basis the management team and any patterns or trends identified. Any changes to the process made as a result of the Post Incident Review must be formally noted.

Appendix 4 - Risk Impact Matrix

Risk Impact Matrix

To decide on the potential or actual impact of an information security incident, the impact matrix below should be used.

Type of Impact	Reputational Media and Member Damages	Reputational Loss within industry and / or Failure to Meet Statutory / Regulatory Obligations	Contractual Loss	Failure to meet Legal Obligations	Financial Loss / Commercial Confidentiality Loss	Disruption to Activities	Personal Privacy Infringement
Low	None	None	None	None	None	None	None
	Contained internally within OdenUnfavorable council member response	Internal investigation or disciplinary involving one individual	Minor contractual problems / minimal SLA failures	Civil lawsuit / small fine - less than £10K	Less than £100,000	Minor disruption to service activities that can be recovered	Personal details revealed or compromised within department
Medium	Unfavorable local media interest	Government authorised investigation by nationally recognised body or disciplinary involving 2 to 9 people	Significant client dissatisfaction. Major SLA failures. Failure to attract new business	Less than £100K Damages and fine	£100,000 - £500,000	Disruption to service that can be recovered with an intermediate level of difficulty. One back up not backing up for 2 or more days	Personal details revealed or compromised internally within authority. Harm mental or physical to one members of staff or public
High	Sustained local media coverage, extending to national media coverage in the short term	Government intervention leading to significant business change. Internal disciplinary involving 10 or more people	Failure to retain contract(s) at the point of renewal	Greater than £100K damages and fine	£500,000 - £1,000,000	Major disruption to service which is very difficult to recover from. Two or more systems not being backed up for two or more days	Severe embarrassment to individual(s)

Information Security Incident Management Policy and Procedure

	Sustained unfavourable national media coverage	Service or product outsourced through Government intervention	Client contract(s) cancelled	Over £1M damages and / or fine Custodial sentence(s) imposed	More than £1,000,000	Catastrophic disruption - service activities can no longer be continued	Detrimental effect on personal & professional life OR large scale compromise affecting many people. Harm mental or physical to two or more members of staff or public
--	--	---	------------------------------	---	----------------------	---	---
